**The Science of Self-report: Implications for Research and Practice** By Arthur A. Stone

Rigorous methodological techniques have been developed in the last decade to improve the reliability and accuracy of self reports from research volunteers and patients about their pain, mood, substance abuse history, or dietary habits. This book presents cutting-edge research on optimal methods for obtaining self-reported information for use in the evaluation of scientific hypothesis, in therapeutic interventions, and in the development of prognostic indicators.

## ALTERNATE BLURB:

Self-reports constitute critically important data for research and practice in many fields. As the chapters in this volume document, psychological and social processes influence the storage and recall of self-report information. There are conditions under which self-reports should be readily accepted by the clinician or researcher, and other conditions where healthy scepticism is required. The chapters demonstrate methods for improving the accuracy of self-reports, ranging from fine-tuning interviews and questionnaires to employing emerging technologies to collect data in ways that minimize bias and encourage accurate reporting.

Representing a diverse group of disciplines including sociology, law, psychology, and medicine, the distinguished authors offer crucial food for thought to all those whose work depends on the accurate self-reports of others.

## **Editorial Review**

Review

*...this volume contains many informative chapters....there is still enough to like about this book to spend time with it and consider carefully the issues. The volume is broad in its scope and should be of interest to researchers and clinicians alike.*

—*Contemporary Psychology*

*Many researchers and clinicians may be hesitant to fully acknowledge the difficulties of amassing data through surveys, questionnaires, and interviews simply because the alternatives are often so unattractive. **The Science of Self-Report** finds its value by generating awareness of these complications.*

—*American Scientist*

## **Users Review**

**From reader reviews:**

**Clara Demoss:**
