## The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human

By V. S. Ramachandran

"A profound intriguing and compelling guide to the intricacies of the human brain." —Oliver Sacks

In this landmark work, V. S. Ramachandran investigates strange, unforgettable cases—from patients who believe they are dead to sufferers of phantom limb syndrome. With a storyteller's eye for compelling case studies and a researcher's flair for new approaches to age-old questions, Ramachandran tackles the most exciting and controversial topics in brain science, including language, creativity, and consciousness.

### **Editorial Review**

From Publishers Weekly

Starred Review. Ramachandran (A Brief Tour of Human Consciousness), director of the Center for Brain and Cognition at UCSD, explores why humans, who are "anatomically, neurologically and genetically, physiologically apes," are not "merely" apes. While animals can communicate with sound and gesture, and chimpanzees can even use words to express immediate needs, humans have developed the ability to speak in structurally complex sentences, and often speak in metaphor. Ramachandran speculates that, as we can map another's actions and intuit their thoughts, we also map our own sensory apparatus, perceiving our surroundings—and perceiving ourselves perceiving our surroundings. We imagine the future and speculate about the past and seek to understand our place in the universe, laying the foundation for our sense of free will; we not only envisage future actions, but are aware of their potential consequences and the responsibility for our choices. Richard Dawkins has called Ramachandran "the Marco Polo of neuroscience," and with good reason. He offers a fascinating explanation of cutting-edge-neurological research that deepens our understanding of the relationship between the perceptions of the mind and the workings of the brain. (Jan.)

\*Starred Review\* The twentieth was the century of physics, with the grand unified theory its quest and goal. The twenty-first is shaping up as the century of neuroscience, with its quest and goal the reaffirmation of human exceptionalism. Boldly asserting, right off the bat, that Homo sapiens is "no mere ape," Ramachandran tells us why the day of neuroscience has dawned. The discovery of mirror neurons (see Marco Iacoboni's exciting *Mirroring People*, 2008) has made a real science out of psychology, for it gives the study of consciousness and the host of mental states contingent on it something physical to theorize about and experiment with. A physician (like Oliver Sacks, a neurologist) as well as a researcher, Ramachandran uses his neurology patients' predicaments to inspire inquiries into how we see and know, the origins of language, the mental basis of civilization, how we conceive of and assess art, and how the self is constructed. Always careful to point out when he is speculating rather than announcing research findings, he is also prompt to emphasize why his speculations, or theories, are not just of the armchair variety but can be put to the test because of what neuroscience has already discovered about the active structures of the human brain. --Ray Olson

Review

"Ramachandran produces an exhilarating and at times funny text that invites discussion and experimentation." ---Kirkus

### **Users Review**

**From reader reviews:**

**Linda Monge:**

Here thing why this The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human are different and reliable to be yours. First of all reading through a book is good nonetheless it depends in the content of computer which is the content is as delicious as food or not. The Tell-Tale Brain: A Neuroscientist's Quest

for What Makes Us Human giving you information deeper and in different ways, you can find any publication out there but there is no reserve that similar with The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human. It gives you thrill studying journey, its open up your own eyes about the thing that happened in the world which is perhaps can be happened around you. It is easy to bring everywhere like in recreation area, café, or even in your technique home by train. If you are having difficulties in bringing the branded book maybe the form of The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human in e-book can be your choice.

### **Cierra Persaud:**

Nowadays reading books be a little more than want or need but also work as a life style. This reading routine give you lot of advantages. The huge benefits you got of course the knowledge even the information inside the book that improve your knowledge and information. The knowledge you get based on what kind of e-book you read, if you want get more knowledge just go with schooling books but if you want really feel happy read one using theme for entertaining such as comic or novel. The actual The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human is kind of reserve which is giving the reader capricious experience.

### **Linda Howard:**

Hey guys, do you desires to finds a new book to read? May be the book with the headline The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human suitable to you? Typically the book was written by popular writer in this era. The book untitled The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Humanis the main one of several books that will everyone read now. This kind of book was inspired a number of people in the world. When you read this reserve you will enter the new dimension that you ever know prior to. The author explained their plan in the simple way, consequently all of people can easily to comprehend the core of this e-book. This book will give you a great deal of information about this world now. To help you see the represented of the world on this book.

### **Robert Mills:**

Do you one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Aim to pick one book that you find out the inside because don't assess book by its cover may doesn't work at this point is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside look likes. Maybe you answer can be The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human why because the wonderful cover that make you consider about the content will not disappoint a person. The inside or content is usually fantastic as the outside or cover. Your reading 6th sense will directly guide you to pick up this book.
