How Do You Find an Exoplanet? (Princeton Frontiers in Physics) By John Asher Johnson

Alien worlds have long been a staple of science fiction. But today, thanks to modern astronomical instrumentation and the achievements of many enterprising observational astronomers, the existence of planets outside our solar system—also known as exoplanets—has moved into the realm of science fact. With planet hunters finding ever smaller, more Earth-like worlds, our understanding of the cosmos is forever changed, yet the question of how astronomers make these discoveries often goes unanswered.

How Do You Find an Exoplanet? is an authoritative primer on the four key techniques that today's planet hunters use to detect the feeble signals of planets orbiting distant stars. John Johnson provides you with an insider's perspective on this exciting cutting-edge science, showing how astronomers detect the wobble of stars caused by the gravitational tug of an orbiting planet, the slight diminution of light caused by a planet eclipsing its star, and the bending of space-time by stars and their planets, and how astronomers even directly take pictures of planets next to their bright central stars.

Accessible to anyone with a basic foundation in college-level physics, *How Do You Find an Exoplanet?* sheds new light on the prospect of finding life outside our solar system, how surprising new observations suggest that we may not fully understand how planets form, and much more.

Editorial Review

Review

One of *Choice's* Outstanding Academic Titles for 2016

"Johnson's enthusiasm for his vibrant field is palpable in this valuable, concise guide for amateur astronomers and anyone else not afraid of a few technicalities."--**Lewis Dartnell, *New Scientist***

"Johnson . . . takes us on an enjoyable journey to the world of exoplanet hunters. . . . An excellent book for anyone interested but also for astronomy students if their curriculum includes one-semester course in exoplanets."--***Read about Science***

"This little red book is a thorough yet very understandable introduction to one of the hottest topics in astronomy--planets outside the solar system. Johnson, one of the leading scientists in the field, has created a great primer for undergraduate students wishing to gain enough knowledge to undertake a project or perhaps win an internship in the field."--***Choice***

From the Back Cover

"Johnson has woven the personal side of being a scientist with rigorous intuition about the techniques used to detect exoplanets. We hear the fresh and articulate voice of a young professor who grew into the shoes of a full-fledged scientist. Johnson's experiences and insights will touch the hearts and minds of readers."--**Debra Fischer, Yale University**

"With remarkable clarity, Johnson presents a concise yet personable, technical yet accessible must-read for all students and practitioners of exoplanet discovery."--**Sara Seager, Massachusetts Institute of Technology**

"*How Do You Find an Exoplanet?* is well focused on the fundamentals and accessible to a wide range of readers. Johnson is highly respected in the exoplanet community, and here he has emphasized what's important, while minimizing or explaining jargon. I know of no serious competitors to this book."--**Eric B. Ford, Pennsylvania State University**

"*How Do You Find an Exoplanet?* presents an engaging overview of modern exoplanetary detection techniques. John Johnson brings a firsthand narrative to this remarkable scientific detective story, while explaining the technical fine points at an accessible level."--**Greg Laughlin, University of California, Santa Cruz**

About the Author

John Asher Johnson is professor of astronomy at Harvard University.

Users Review

From reader reviews:

Jimmy Borrelli:

Do you have favorite book? In case you have, what is your favorite's book? E-book is very important thing for us to find out everything in the world. Each reserve has different aim or goal; it means that publication has different type. Some people truly feel enjoy to spend their time to read a book. They are reading whatever they have because their hobby is reading a book. Why not the person who don't like studying a book? Sometime, man or woman feel need book when they found difficult problem or even exercise. Well, probably you will want this How Do You Find an Exoplanet? (Princeton Frontiers in Physics).

Paul Weston:

Book is to be different for every grade. Book for children until finally adult are different content. As you may know that book is very important for all of us. The book How Do You Find an Exoplanet? (Princeton Frontiers in Physics) was making you to know about other understanding and of course you can take more information. It doesn't matter what advantages for you. The book How Do You Find an Exoplanet? (Princeton Frontiers in Physics) is not only giving you considerably more new information but also to be your friend when you truly feel bored. You can spend your own personal spend time to read your book. Try to make relationship with all the book How Do You Find an Exoplanet? (Princeton Frontiers in Physics). You never sense lose out for everything should you read some books.

Lenora Hungate:

Nowadays reading books are more than want or need but also turn into a life style. This reading routine give you lot of advantages. The advantages you got of course the knowledge even the information inside the book that improve your knowledge and information. The details you get based on what kind of book you read, if you want attract knowledge just go with education and learning books but if you want sense happy read one with theme for entertaining including comic or novel. The particular How Do You Find an Exoplanet? (Princeton Frontiers in Physics) is kind of publication which is giving the reader erratic experience.

Donald Davisson:

Reading a book make you to get more knowledge from the jawhorse. You can take knowledge and information from the book. Book is prepared or printed or created from each source that filled update of news. On this modern era like currently, many ways to get information are available for anyone. From media social including newspaper, magazines, science guide, encyclopedia, reference book, story and comic. You can add your knowledge by that book. Are you hip to spend your spare time to spread out your book? Or just looking for the How Do You Find an Exoplanet? (Princeton Frontiers in Physics) when you required it?
