**Obstetric Medicine: A Problem-Based Approach** By Catherine Nelson-Piercy, Joanna Girling

Recognition of the importance of maternal medicine is now reflected in the content of the MRCOG exam, core training and higher training in both obstetrics and medicine. This book approaches obstetric medicine from the point of view of real patients and clinical scenarios as well as model answers to exam questions. The book will be invaluable for trainees and consultants who want to 'test themselves'.

## **Editorial Review**

From the Back Cover

Medical problems in pregnancy are responsible for much maternal and fetal morbidity and mortality. This book is a collection of exam questions and case studies which illustrates both common and more unusual problems in obstetric medicine. Using a problem-based approach to both teach and test knowledge, it incorporates many different approaches to obstetric medicine, in Q & A format. The 'Extended Matched Questions' section covers the breadth of theoretical knowledge. The 'Short Answers / Data Interpretation' section requires a systematic approach to a clinical problem. Most of the case reports are based on real cases and all are accompanied by a brief literature review to further broaden the learning experience.

This book is a valuable learning and exam preparation guide which enables trainees and consultants to test themselves using the different methods, as well as read about medical problems in pregnancy they may not yet have encountered.
