Biology Now (Core Edition) By Anne Houtman, Megan Scudellari, Cindy Malone, Anu Singh-Cundy

A balance of science and story, with a focus on the people doing biology now.

Written by a science journalist and teachers with over thirty years experience in the classroom, *Biology Now* skillfully blends core biology concepts with popular science stories of real people doing science today. These stories capture the human face of biology, highlighting the work of researchers and medical professionals who are making new discoveries every day. The text is accompanied by a wealth of carefully crafted pedagogy that teaches students how to analyze science in the news, interpret data, ask questions, and distinguish between science and pseudoscience.

Editorial Review

About the Author

Anne Houtman is Dean of the School of Natural Sciences, Mathematics, and Engineering at California State University Bakersfield. Anne has over 20 years of experience teaching non-majors biology at a variety of private and public institutions, which gives her a broad perspective and a wide view of the education landscape. She is strongly committed to evidence-based, experiential education and has been an active participant in the national dialogue on STEM (science, technology, engineering, and math) education for almost 20 years. Anne's research interests are in the ecology and evolution of hummingbirds. She grew up in Hawaii, received her doctorate in zoology from the University of Oxford, and conducted postdoctoral research at the University of Toronto.

Megan Scudellari is an award-winning freelance science writer and journalist based in Boston, Massachusetts, specializing in the life and environmental sciences. She has contributed to Newsweek, Scientific American, Discover, Nature, and Technology Review, among others. For five years she worked as a correspondent and later as a contributing editor for The Scientist magazine. In 2013, she was awarded the prestigious Evert Clark/Seth Payne Award in recognition of outstanding reporting and writing in science. She has also received accolades for investigative reporting on traumatic brain injury and a feature story on prosthetics that mimic a sense of touch. Megan received an MS from the Graduate Program in Science Writing at the Massachusetts Institute of Technology, a BA from Boston College, and she has worked as an educator at the Museum of Science, Boston.

Cindy Malone began her scientific career wearing hip-waders in a swamp behind her home in Illinois. She earned her BS in Biology at Illinois State University and her PhD in Microbiology and Immunology at UCLA. She continued her post-doctoral work at UCLA in Molecular Genetics. Dr. Malone is currently a distinguished educator and an Associate Professor at California State University, Northridge, where she is the Director of the CSUN-UCLA Bridges to Stem Cell Research Program funded by the California Institute for Regenerative Medicine. Dr. Malone's research is aimed at training undergraduates and masters degree candidates to understand how genes are regulated through genetic and epigenetic mechanisms that alter gene expression. She has been teaching non-majors biology for over 15 years and has won curriculum enhancement and teaching awards at CSUN.

Anu Singh-Cundy received her PhD from Cornell University and did post-doctoral research in cell and molecular biology at Penn State. She is an associate professor at Western Washington University, where she teaches a variety of undergraduate and graduate courses, including organismal biology, cell biology, plant developmental biology, and plant biochemistry. She has taught introductory biology to non-majors for over 15 years and is recognized for pedagogical innovations that communicate biological principles in a manner that engages the non-science student and emphasizes the relevance of biology in everyday life. Her research focuses on cell-cell communication in plants, especially self-incompatibility and other pollen-pistil interactions. She has published over a dozen research articles and has received several awards and grants, including a grant from the National Science Foundation.

Users Review

From reader reviews:

Jackie Lafond:

Do you one among people who can't read enjoyable if the sentence chained inside straightway, hold on guys this aren't like that. This Biology Now (Core Edition) book is readable through you who hate the perfect word style. You will find the details here are arrange for enjoyable studying experience without leaving also decrease the knowledge that want to give to you. The writer regarding Biology Now (Core Edition) content conveys the thought easily to understand by many people. The printed and e-book are not different in the written content but it just different by means of it. So , do you still thinking Biology Now (Core Edition) is not loveable to be your top collection reading book?

June Ross:

A lot of people always spent their free time to vacation or perhaps go to the outside with them loved ones or their friend. Were you aware? Many a lot of people spent they free time just watching TV, or perhaps playing video games all day long. If you would like try to find a new activity honestly, that is look different you can read the book. It is really fun for yourself. If you enjoy the book that you just read you can spent 24 hours a day to reading a e-book. The book Biology Now (Core Edition) it doesn't matter what good to read. There are a lot of people who recommended this book. We were holding enjoying reading this book. Should you did not have enough space bringing this book you can buy the actual e-book. You can m0ore easily to read this book from your smart phone. The price is not very costly but this book has high quality.

Scott Manuel:

Your reading 6th sense will not betray you, why because this Biology Now (Core Edition) publication written by well-known writer we are excited for well how to make book that could be understand by anyone who read the book. Written with good manner for you, dripping every ideas and publishing skill only for eliminate your own personal hunger then you still question Biology Now (Core Edition) as good book not only by the cover but also from the content. This is one publication that can break don't assess book by its cover, so do you still needing one more sixth sense to pick this kind of!? Oh come on your studying sixth sense already told you so why you have to listening to another sixth sense.

Debra Becnel:

This Biology Now (Core Edition) is fresh way for you who has intense curiosity to look for some information as it relief your hunger details. Getting deeper you in it getting knowledge more you know or you who still having little digest in reading this Biology Now (Core Edition) can be the light food for yourself because the information inside that book is easy to get through anyone. These books develop itself in the form which is reachable by anyone, that's why I mean in the e-book form. People who think that in e-book form make them feel drowsy even dizzy this reserve is the answer. So there is no in reading a book especially this one. You can find what you are looking for. It should be here for you. So , don't miss that! Just read this e-book kind for your better life and also knowledge.
