Water and Sanitation Related Diseases and the Environment: Challenges, Interventions and Preventive Measures From Wiley-Blackwell

Written by authorities from various related specialties, this book presents the most complete treatment possible of the conditions responsible for water- and sanitation-related diseases, the pathogens and their biology, morbidity and mortality resulting from lack of safe water and sanitation, distribution of these diseases, and the conditions that must be met to reduce or eradicate them. Preventive measures and solutions are presented throughout. This book is an essential resource for all graduate students, postdoctoral scholars, and professionals in infectious disease, public health and medicine, chemical and environmental engineering, and international affairs.

Key features:

- Provides a comprehensive understanding of the interconnection among many factors related to water-related diseases, sanitation and hygiene
- Brings together experts from various specialties to address each area covered and to assist in bringing about the understanding of those interconnections
- Provides examples of successful interventions with knowledge about how they were brought about so that information can be use to replicate the initiative in full or in part
- Provides an appreciation of the concerns and solutions addressed from an international perspective with high and low technological solutions
- Provides insight into the international dimension of these concerns and how they can be best addressed
- Four hours of accompanying multimedia DVD on two discs

Editorial Review

Review

“All of them, in particular those who were used to externalize health effects from their approaches, will significantly benefit from this well documented book, that provides the reader an information-rich and structured view on the water-environmental health nexus.” (*International Journal of Environment and pollution*, 1 November 2012)

“This comprehensive book advises treatment of conditions responsible for water and sanitation-related diseases . . . Few books could claim a title as broad and embracing as this one. It posits a way forward for the cornerstone for global development. It is a primer for organizations as diverse as the World Bank, the United Nations, and the U.S. Agency for International Development. However sobering, it is worth any concerned person's time.” (*Doody's*, 16 November 2012)

“...it is wonderful how much you have included and how valuable this should be to people working in so many disciplines. And I loved your DVDs---great stories and well produced. Most of all, I think people all over the world will be able to relate to them.”

David Ellis, Ph.D., President Emeritus, Museum of Science, Boston

“This is a truly interdisciplinary book and reflects really well the need to work across scientific boundaries, and I think shows what can be achieved through collaboration.” (*Society for General Microbiology*, 15 May 2012)

"This book will promote integrated studies/research on water, sanitation-related diseases and the environment and will contribute to theoretical and practical respects of interventions and preventive measures, and therefore lead to a better life quality - for millions." (Yaqian Zhao, 2011 Centre for Water Resources Research, University College Dublin , 1 December 2011)

"Written by experts from the fields of public health, medicine, epidemiology, environmental health, climate change, environmental engineering, and population research, this authoritative volume provides a thorough understanding of the interconnection among many factors linked to water related diseases, sanitation, and hygiene." (Miss Eco Glam, 1 October 2011)

"In 2010, the United Nations recognised the human right to water and sanitation. Janine Selendy has produced a critical tool to help us take the next step forward in understanding the nature and causes of water and sanitation related diseases and in finding real solutions. The human right to water and sanitation is only as good as its implementation. This book leads the way." (Maude Barlow, Senior advisor on water to the 63rd president of the United Nations general assembly 2008-09, January 2012)

From the Back Cover

The single authoritative resource on the causes of and successful interventions for water and sanitation-related diseases

This book presents the most complete treatment possible of the conditions responsible for water and sanitation-related diseases, the pathogens involved and their biology, the morbidity and mortality resulting from lack of safe water and sanitation, the distribution of these diseases, and the conditions that must be met to reduce or eradicate them. Written by experts from the fields of public health, medicine, epidemiology, environmental health, climate change, environmental engineering, and population research, this authoritative volume provides a thorough understanding of the interconnection among many factors linked to water-related diseases, sanitation, and hygiene.

Divided into eight comprehensive sections that address the concerns from an international perspective, this volume covers:

- The significance of the close relationships between water access and quality, lack of adequate sanitation and hygiene, and the relationship of human activity to the diseases
- Means of accessing clean water and preventing contamination of water
- The range of sanitation and hygiene measures available to reduce disease
- The broad extent, variety, and ramifications of environmental factors
- Ameliorating conditions and preventive measures to reduce pollutants found in ground and surface waters
- The adverse health impacts of water pollution, dam construction, irrigation development, and flood control

Preventive measures and innovative, successful solutions are presented throughout, as well as featured in more detail in a special section at the end of the book. This section highlights examples from a diversity of locations in both developed and developing countries, focusing on what has been achieved in the control of water-related diseases—and what can be accomplished if the multi-factorial approach in this book is followed. The accompanying DVD, as well as a companion website, includes this vital information in the form of case studies and articles, providing guidance for possible action on local and national as well as international levels.

This timely text is an essential resource for all graduate students and postdoctoral scholars as well as for professionals in infectious diseases, public health and medicine, chemical and environmental engineering, international affairs, disease prevention, and public policy.

About the Author

Janine Selendy is Founder, Chairman and President of HORIZON International, a non-profit organization based at Yale University, which addresses health, environment and disease issues worldwide. She also serves as principal editor and publisher of Horizon's web-based Solutions Site. She is executive producer of more than 20 television documentaries, many of which have won awards and have been broadcast in many countries. She is also a Research Affiliate in the Department of Molecular, Cellular and Developmental Biology, Yale University. Her background in medical, scientific, environmental and other areas provides her with an appreciation of the interconnectedness of many subjects.

Users Review

From reader reviews:

Mary Muncy:

Book is to be different for every single grade. Book for children until adult are different content. We all know that that book is very important for us. The book Water and Sanitation Related Diseases and the Environment: Challenges, Interventions and Preventive Measures seemed to be making you to know about other know-how and of course you can take more information. It is very advantages for you. The e-book

Water and Sanitation Related Diseases and the Environment: Challenges, Interventions and Preventive Measures is not only giving you considerably more new information but also to get your friend when you truly feel bored. You can spend your spend time to read your guide. Try to make relationship together with the book Water and Sanitation Related Diseases and the Environment: Challenges, Interventions and Preventive Measures. You never sense lose out for everything in the event you read some books.

Martha Howell:

In this 21st millennium, people become competitive in every single way. By being competitive now, people have do something to make them survives, being in the middle of the crowded place and notice by simply surrounding. One thing that sometimes many people have underestimated this for a while is reading. Yep, by reading a guide your ability to survive raise then having chance to stay than other is high. For yourself who want to start reading the book, we give you this specific Water and Sanitation Related Diseases and the Environment: Challenges, Interventions and Preventive Measures book as starter and daily reading book. Why, because this book is usually more than just a book.

Beth Sanders:

A lot of people always spent their own free time to vacation as well as go to the outside with them family or their friend. Do you know? Many a lot of people spent these people free time just watching TV, or even playing video games all day long. If you would like try to find a new activity here is look different you can read any book. It is really fun for you personally. If you enjoy the book you read you can spent the whole day to reading a e-book. The book Water and Sanitation Related Diseases and the Environment: Challenges, Interventions and Preventive Measures it doesn't matter what good to read. There are a lot of those who recommended this book. We were holding enjoying reading this book. When you did not have enough space to deliver this book you can buy the e-book. You can m0ore easily to read this book from a smart phone. The price is not too expensive but this book possesses high quality.

Carolyn Hoar:

In this period of time globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The fitness of the world makes the information simpler to share. You can find a lot of personal references to get information example: internet, classifieds, book, and soon. You can observe that now, a lot of publisher in which print many kinds of book. Typically the book that recommended for your requirements is Water and Sanitation Related Diseases and the Environment: Challenges, Interventions and Preventive Measures this publication consist a lot of the information in the condition of this world now. This kind of book was represented how do the world has grown up. The language styles that writer value to explain it is easy to understand. The actual writer made some study when he makes this book. This is why this book appropriate all of you.
